Erardo Aldana Pessoa

Backend Software Engineer (Python) · Full-Stack

Profile

Computer Engineering graduate from the University of Alicante (2026), final-year project graded 10/10 with Distinction. I build backends with Python, FastAPI and PostgreSQL and I'm comfortable on the frontend with React and TypeScript. About 14 months of industry experience across internships and a training contract (NTT Data, Autis Ingenieros) and several end-to-end projects with Docker, tests and CI. Looking for my first developer role in a team where I can learn fast and ship code people use.

Experience

NTT Data · **Appian Developer (training contract)** *Nov 2025 – Feb 2026*
Internal Appian bootcamp (enterprise low-code platform) and onboarding onto a project for ENAIRE, Spain's air navigation service provider. Worked alongside client teams within a consulting delivery model.
Appian · Low-code · Consulting

Autis Ingenieros · **Developer Intern** *Feb–Jun 2020 & Feb–Jun 2021*
Contributed to a LabVIEW machine-vision inspection system that detects paint defects on automotive parts: image capture, processing and decision rules running on the production line.
LabVIEW · Machine vision · Automotive

Leroy Merlin · **Cashier** *(other experience)* *Aug 2026 – present*
Checkouts, self-checkout assistance (machine issues and customer help), returns and order pick-up; invoices, receipts and refunds.

Earlier jobs · **Logistics, production and retail** *(other experience)*
Warehouse worker, machine operator, production operator and stock replenisher, alongside my vocational studies and degree.

Projects

EcoAlerta · **Final-year project · 10/10 Distinction** gh/tfg-medioambiente-ua
PWA to report and track environmental incidents: geospatial search with PostGIS, three JWT-based roles, admin panel and end-to-end tests with Playwright, fully containerised with Docker.
React · Node.js · PostgreSQL/PostGIS · Docker · Playwright

Food Donation Network · **Web Engineering · UA · team backend** gh/food-donation-backend
In a course team, I built almost the entire backend: a REST API connecting donors with NGOs and food banks, with hexagonal architecture, async SQLAlchemy 2.0 and JWT authentication.
FastAPI · PostgreSQL · SQLAlchemy 2.0 · JWT · Docker

Hydrofulness · **Aguas de Alicante Hackathon 2026 · technical lead**
Starting from the real consumption data my team gathered, I designed and built the whole technical solution: ETL, anomaly detection with Isolation Forest, water-stress prediction per neighbourhood, FastAPI backend and React dashboard.
FastAPI · React · TypeScript · scikit-learn · Docker

StudySync · **Personal project · in progress** gh/studysync
Real-time collaborative study platform: video rooms (LiveKit), server-authoritative Pomodoro synced through Redis and WebSockets, and note sharing with reviews.
FastAPI · React · PostgreSQL · Redis · WebSocket

Chaos Crew · **Team game · C++** gh/chaos-crew-dca
Co-op 2D game in modern C++ with an Entity-Component-System architecture (EnTT), Raylib, cross-platform CMake build and continuous integration on GitHub Actions.
C++ · EnTT · Raylib · CMake · GitHub Actions

Education

BSc Computer Engineering · University of Alicante · 2026 · Final-year project 10/10 with Distinction

Higher VET diplomas: Multiplatform & Web Development; VET in Systems & Networks · Spanish vocational training (DAM, DAW, SMR)

Cambridge English B2 First (FCE) · Cambridge Assessment English
